Zomato Order & Restaurant Analysis Using Power BI

By Pavithra Kasinathan Selvavinayagam

Zomato Database in MySQL

- ◆ A new database **ZomatoDB** was created along with two tables:
 - Zomato_Restaurants
 - Zomato_Orders
- ◆ Simple data transformations, such as Data cleaning and null value handling, are performed using SQL query.
- ◆ Executed exploratory queries to analyze restaurant count, top cities by orders, revenue, and average order value.
- ◆ Applied SQL joins and aggregations to combine restaurant and order details for business analysis.

SQL Data Exploration & Aggregation Outputs

city	Total_Restaurants
Bangalore	109
Mumbai	115
Kolkata	92
Delhi	93
Chennai	91

city	Average_order_amount
Chennai	1041.127136
Bangalore	1040.877079
Kolkata	1039.502518
Mumbai	1035.998301
Delhi	1033.986507

city	Total_orders
Mumbai	3384
Bangalore	3300
Delhi	2857
Kolkata	2732
Chennai	2727

restaurant_name	Total_sales
Restaurant_116	50931.26
Restaurant_262	48860.24
Restaurant_56	48645.78
Restaurant_27	48562.10
Restaurant_127	48203.20

restaurant_name	Total_Revenue
Restaurant_116	50931.26
Restaurant_262	48860.24
Restaurant_56	48645.78
Restaurant_27	48562.10
Restaurant_127	48203.20
Restaurant_141	47153.34
Restaurant_208	47065.02
Restaurant_396	46774.97
Restaurant_48	44596.81
Restaurant_455	44281.73
Restaurant_136	44155.08
Restaurant_257	44136.90
Restaurant_92	44060.49
Restaurant_82	43376.69
Restaurant_467	43083.12

Power BI Analysis and Visualization

- Imported transformed Excel data into Power BI and performed data cleaning in Power Query Editor.
- Then established relationships between the restaurant and order datasets for analysis and visualization.

City-wise Restaurant Distribution

Task 1: Number of Restaurants per City

- Mumbai, and Bangalore show the highest restaurant concentration and order activity, while Chennai and Kolkata have comparatively lower restaurant presence in the dataset.

City-wise Order Contribution

Task 2: Percentage of Orders from Different Cities

- Orders are relatively evenly distributed across cities, but Mumbai and Bangalore slightly dominate the order market.
- The comparison between restaurant count and order distribution shows that cities with higher restaurant availability generally experience higher customer order activity and market demand.

Monthly Revenue Trend Analysis

A **Line chart** is used to visualize and analyze how order amounts fluctuate over time to identify peak sales periods and slow periods.

- The order amount trend indicates noticeable monthly fluctuations in customer spending behavior.
- April recorded the highest total sales, while May and June experienced lower order activity.
- The trend gradually stabilized during the later months, suggesting moderate recovery in customer demand.

Correlation Analysis of Factors Affecting Restaurant Ratings

- Faster delivery times tend to maintain slightly better customer ratings, although the relationship is not strongly consistent across all restaurants.
- Customer ratings are distributed similarly across different price ranges, indicating that pricing alone does not significantly influence ratings.
- Restaurants with higher order volumes generally maintain stable ratings, suggesting consistent customer demand and service performance.

Overall conclusion from analysis: **Ratings are influenced by multiple factors**

Highest Revenue-Generating Restaurants Analysis

Column Chart is used to identify the **highest-earning restaurants** based on total revenue.

- **Restaurant_116** generated the highest total sales, supported by strong order volume and consistent customer spending patterns observed in the summary table(Task 9).
- **Restaurants_262, 56, and 27** also maintained similar sales performance, indicating stable customer demand across the top-performing restaurants.
- Restaurant_127 achieved high sales mainly due to higher order volume despite having a comparatively lower average order value.

Revenue Contribution Analysis by Area

- Area_A generated the highest revenue, indicating strong customer demand and higher order activity in that locality.
- Area_E recorded the lowest revenue and order count among the analyzed localities, indicating comparatively lower customer activity.
- Revenue differences across areas are primarily driven by higher order volumes rather than major differences in average order value.

Order Density Analysis by City

- Mumbai and Bangalore showed the highest order density, indicating strong customer demand and delivery activity.
- Chennai recorded the lowest order volume among the analyzed cities.
- Higher restaurant availability generally aligned with higher order activity across cities.
- The heat map helps identify high-demand and low-demand markets for business planning.

Order Density by City		
City	Total_order_count	Number of Restaurants
Mumbai	3384	115
Bangalore	3300	109
Delhi	2857	93
Kolkata	2732	92
Chennai	2727	91

KPI Analysis – Revenue & Average Order Value

- Total Revenue reached approximately 15.57M, showing strong overall business performance and customer demand.
- Revenue increased by 9% compared to the previous month, indicating positive monthly growth in sales activity.
- Average Order Value remained relatively stable at 1.04K, with only a slight decline of 0.1%, suggesting consistent customer spending behavior.

Summary

Restaurant-wise Sales Performance Analysis

The summary table combines total sales, order volume, and average order value to evaluate restaurant performance and customer demand patterns.

Restaurant Name	Total Sales	Number of orders	Average order value
Restaurant_116	50,931.26 ▲	46	1,107.20
Restaurant_262	48,860.24 ▲	41	1,191.71
Restaurant_56	48,645.78 ▲	44	1,105.59
Restaurant_27	48,562.10 ▲	43	1,129.35
Restaurant_127	48,203.20 ▲	50	964.06
Restaurant_141	47,153.34 ▲	40	1,178.83
Restaurant_208	47,065.02 ▲	45	1,045.89
Restaurant_396	46,774.97 ▲	40	1,169.37
Restaurant_48	44,596.81 ▲	39	1,143.51
Restaurant_455	44,281.73 ▲	40	1,107.04
Restaurant_136	44,155.08 ▲	41	1,076.95
Restaurant_257	44,136.90 ▲	38	1,161.50
Restaurant_92	44,060.49 ▲	38	1,159.49
Restaurant_82	43,376.69 ▲	39	1,112.22
Restaurant_467	43,083.12 ▲	39	1,104.70
Restaurant_462	43,022.24 ▲	39	1,103.13
Restaurant_170	42,801.53 ▲	40	1,070.04
Restaurant_211	42,646.15 ▲	37	1,152.60
Restaurant_91	42,629.96 ▲	36	1,184.17
Restaurant_33	42,521.61 ▲	38	1,118.99
Restaurant_368	41,958.25 ▲	37	1,134.01
Restaurant_351	41,945.08 ▲	41	1,023.05
Restaurant_323	41,882.60 ▲	38	1,102.17
Restaurant_165	41,702.84 ▲	40	1,042.57
Restaurant_335	41,550.04 ▲	36	1,154.17
Total	1,55,73,886.64	15000	1,038.26

Power BI Dashboard

Recommendations:

- Sales peaked during April followed by a sharp decline in May, indicating the need to analyze seasonal trends or promotional strategies that influenced customer demand.
- Delivery time and pricing showed only a limited impact on customer ratings, suggesting that customer satisfaction is influenced by multiple service factors.
- Area_E recorded comparatively lower revenue and order activity, highlighting opportunities for targeted marketing and customer engagement initiatives.
- The slight decline in Average Order Value indicates the need for upselling strategies and promotional offers to improve customer spending.

The background features three abstract, rounded shapes in shades of red and pink. A large, vibrant red shape is positioned in the upper left corner. Below it, a lighter pink shape is visible. In the bottom left corner, there is a dark red shape. The text "Thank You" is centered in the middle of the image.

Thank You
